

Relief and efficiency are now possible with an innovative, state-of-the-art software program.

- *Designed as a follow-up tool to be used by law enforcement officers assigned to mentor recruits who have successfully completed a basic training course.*
- *Program used by these “mentor” officers to systematically record their observations against defined departmental standards and to track a recruit’s mastery of the competencies deemed critical for the success in the early years of a law enforcement career.*

Designed by an officer with over twenty years of law enforcement experience and still working in the field. Certified by M.C.J. Training council as F.T.O. Officer in 1998. Certified by M.C.J. Training Council in 2000 as a trainer for future F.T.O. Officers in Massachusetts.

TAKE YOUR FTO PROGRAM INTO THE NEXT CENTURY

Research reveals that the first organized Field Training program was implemented by the Milwaukee Police Department in April 1962. After many years of field trial, the FTO program has settled upon two national models, the 7 point San Jos Model and a similar 5 point Model.

SOFTWARE DEVELOPED FOR YOUR FTO PROGRAM

Many law enforcement experts now believe that both models have been the most beneficial advancements in the entire profession—for no other specialized unit, strategy or policing

tool has accomplished so much to improve the overall knowledge, skills and abilities of officers.

RAISING THE NATIONAL STANDARD

It is somewhat disheartening, then, that the national standard for Field Training has remained relatively stagnant. Most FTO programs struggle with a variety of serious problems—including a lack of support from administrators, poor program communication, inept standardization, sporadic documentation and paperwork requirements that would overwhelm anyone.

AUTOMATED DAILY OBSERVATION AND WEEKLY OBSERVATION REPORTING AND EVALUATION

This software program offers a solution to these problems. The software is used to systematically record the FTO's observations and track a Probationary Officer's ability to conform to training. The possibilities for this program are almost endless and include bar charts to easily identify the strengths and weaknesses of the recruit, trainer and training program. Retrieve records with ease with the click of a button.

THIS FTO SOFTWARE IS USER FRIENDLY.

There are many benefits with this program, with the demands facing the FTO's and their supervisors everyday, it can shorten the time it takes to complete their Daily & Weekly Observation Reports. Reports that took hours to complete can now be completed in a matter of minutes! This software program can be installed in your cruiser's laptop computer, or in a computer at the Police Station. The FTO Officer simply enters their observations of the recruit and the information is saved automatically, for review. This will save your department time and money.

The FTO Officer simply types in the information while evaluating the recruit in the field.

Please take advantage of the free demo CD provided for you and your department.

What are the requirements for running this program on your computer system?

- 486 CPU running at 33 MHz or higher;
- Windows 2000, NT, XP, Vista
- 32 MB RAM

WHAT IS THE COST?

\$489.00 gives you unlimited installations of this program on your computer systems. A yearly licensing fee of \$39.95 includes technical support.

We have a web-based version of this program for larger agencies at an additional cost. Your database is hosted on a powerful Xserve Quad Xeon 64-bit server running advanced software.

WE CAN ALSO DESIGN THIS PROGRAM TO MEET YOUR ORGANIZATIONS SPECIFICATIONS

We have tailor designed this program for many agencies to meet their various needs. The associated costs depend on the amount of changes made. Please contact us for additional information.
